

Less glue - less energy. Savings with every carton!

Xmelt. Bundles efficiency in final packaging production.

- savings in adhesive and energy consumption
- low maintenance costs
- requires less spare parts than conventional equipment
- minimum rejects at maximum production speed
- reliable high quality system doesn't require contracts for service

"You prefer to work from your central operator console?"

No problem. The smart control panel is detachable and allows to place it virtually anywhere: No matter, whether at the machine, at your desk, or even both.

"Just control everything where you can see it!"

Enjoy more freedom of movement with the smart control panel. Swivel, turn, take along, send messages to the computer. Adapt the melters to your ergonomic requirements. Regardless of whether you chose the unit with 4 kg (8,8 lb) or 8 kg (17 lb) or 12 kg (26 lb) tank contents.

Everybody talks about development and innovation – Baumer hhs makes it happen.

20 years of fresh developments and perfected know-how as a global player in glue application speak for themselves. Now, we also want to perfect your hotmelt application with a new system.

The carefully coordinated Xmelt® range includes the new melters as well as temperature controlled hoses and a variety of application guns with brackets and nozzles which suit any requirement. The system's intelligence makes it possible to optimize the necessary system settings automatically.

Available guns include fine dot and line application, coating and multi-heads to finely swirled Spiralmelt application. Their modular design makes them adaptable to your requirements again and again.

A motivated team of experienced specialists is available to you at Baumer hhs. They will advise you reliably and competently in all questions relating to the subject of glue application and quality assurance – globally.

We understand precision as a manufacturing principle and superior service as the basis of your success.

Xmelt® melters in connection with Xmelt® hotmelt hoses and guns create a hotmelt application system deserving of the name.

The central melter recognises all connected modules including their history and automatically optimises the system parameters. This makes setting up the system easier, safer and quicker for you.

The Xmelt® melters transform glue granules, pellets or blocks into liquid form and regulate the process pressures as well as the temperatures in the entire system. The melter controls the hotmelt application guns by pumping the liquid through heated hoses to the independently heated guns where this is applied to the surface of your packaging at optimum temperature and ideal pressure.

One source for everything

We offer complete solutions for your production.

We train your team

We offer certified training courses for your technicians and users.
